

Aspect Impact Analysis Training

Duration: 1 Day

Mode: Online / Classroom / On-Site

Certification: QLSS Certificate of Completion

Course Introduction

Aspect Impact Analysis is a foundational element of ISO 14001:2015 Environmental Management System (EMS). It enables organizations to identify the environmental aspects of their activities, products, and services and assess the related impacts in order to manage them effectively.

This training helps participants understand how to systematically identify, assess, and document environmental aspects and impacts using risk-based thinking. It supports effective EMS implementation, compliance with environmental legislation, and sustainability goals.

Pre-requisites

- Familiarity with operational or facility processes
- No prior EMS or ISO 14001 training required
- Suitable for cross-functional teams and environment officers

Learning Objectives

- Understand definitions of environmental aspect and impact
- Identify aspects related to air, water, land, noise, energy, and waste
- Apply aspect-impact evaluation techniques (frequency, severity, legal exposure)
- Prioritize significant environmental aspects (SEAs)
- Document and review aspect-impact registers
- Align aspect management with ISO 14001:2015 and compliance obligations

Course Agenda

1. Introduction to Environmental Aspects and Impacts

- Definitions and terminology (aspect, impact, significance)
- Relevance under ISO 14001:2015
- Legal and sustainability context

2. Identifying Environmental Aspects

- Inputs, outputs, and activities across life cycle
- Aspect examples: emissions, effluents, energy use, noise, hazardous waste
- Techniques: process mapping, walkthroughs, team brainstorming

3. Assessing Environmental Impacts

- Impact categories: air, water, land, biodiversity, community
- Evaluating severity, probability, frequency, and control
- Common scoring systems (risk matrix, weighted scoring)

4. Significance Determination

- Criteria for determining significance
- Decision matrix and documentation practices
- Examples of significant and non-significant aspects

5. Aspect Impact Register and Maintenance

- Format and structure of an aspect-impact register
- Periodic review and updates (new process, audit finding, change)
- Role in EMS audits and compliance reporting

6. Linking to ISO 14001:2015 EMS Framework

- Context of organization and life cycle perspective
- Clause mapping to risk/opportunity and compliance obligations
- Integration with environmental objectives and action plans

What You'll Receive

- QLSS Certificate of Completion

- Training Material / Handout (PDF Format)
- Final Assessment with Individual Evaluation Report

Who Should Attend

- EHS Coordinators and Environmental Officers
- ISO 14001 Implementation Teams
- Compliance and Facility Managers
- Process Owners and Line Managers
- Internal Auditors and Risk Managers

Trainer Profile

Our trainers are experienced EMS and sustainability professionals with practical expertise in ISO 14001 implementation and audit preparedness. They guide participants in identifying real-world environmental risks, structuring registers, and aligning documentation with compliance and performance improvement goals.

Instructional Methodology

- Visual walkthrough of aspect and impact identification
- Use of standard evaluation and scoring templates
- Case-based prioritization of significant aspects
- Group discussions and hands-on register development

What Makes Aspect Impact Training Unique

- Risk-based thinking approach
- Ready-to-use templates and scoring matrices
- Compliance alignment with ISO 14001 and Indian laws
- Covers full cycle from identification to documentation
- Ideal for audits, EMS planning, and environmental governance
