

IATF 16949:2016 Internal Auditor Training – 2 Days

Duration: 2 Days

Mode: Online / Classroom / On-Site

Certification: QLSS Certificate of Completion

Course Introduction

Internal auditing is a cornerstone of effective Quality Management Systems (QMS) in the automotive sector. The IATF 16949:2016 Internal Auditor Training by QLSS is designed for quality professionals, engineers, and process owners who are responsible for maintaining and improving the quality system through structured internal audits.

This comprehensive 2-day training enables participants to interpret the IATF 16949 and ISO 9001:2015 requirements, plan and perform internal audits using a process approach, and write effective nonconformity reports. The course includes practical simulations, real-life examples, and a final assessment to validate competency.

Pre-requisites

To maximize learning effectiveness, participants should ideally possess the following background:

- A basic understanding of ISO 9001:2015 requirements (familiarity with clauses is recommended)
- Exposure to manufacturing, engineering, or quality functions within an organization
- Experience working in a Tier 1 / Tier 2 automotive supplier environment is advantageous
- No prior audit experience is necessary; the course will build auditing skills from the ground up

Pre-Training Preparation (Recommended):

Upon registration, participants will receive:

- A Pre-Course Reading Guide covering ISO 9001 basics, PDCA cycle, and core terms
- A self-paced quiz to assess understanding of basic QMS terms (optional)

Learning Objectives

- Understand the structure, objectives, and scope of IATF 16949:2016 and its integration with ISO 9001:2015
- Recognize and evaluate Customer-Specific Requirements (CSRs) in audits
- Apply the process approach and risk-based thinking in planning and conducting audits
- Develop audit checklists aligned with product and process characteristics
- Conduct opening meetings, interview auditees, and gather objective evidence
- Identify audit findings, classify nonconformities, and write clear, actionable audit reports
- Contribute to continual improvement and corrective action processes within the QMS

Course Agenda

Day 1: Foundation of Automotive Internal Auditing

- Introduction to IATF 16949:2016 and ISO 9001:2015
- Key terms and definitions: Product safety, conformity, risk, process
- Automotive Process Approach and Turtle Diagrams
- Risk-Based Thinking and FMEA alignment
- Understanding ISO 19011:2018 auditing guidelines
- Preparing an audit plan and assigning audit responsibilities
- Developing effective process-based audit checklists
- Interpreting and mapping Customer-Specific Requirements (CSRs)

Practical Exercises:

- Clause-wise audit checklist creation
- CSR mapping to control plans and audit questions
- Case study: Supplier receiving and inspection process

Day 2: Audit Execution and Reporting

- Conducting internal audits: Opening meetings, interviews, evidence collection
- Evaluating compliance, process effectiveness, and risk control
- Identifying and grading nonconformities (Major, Minor, Opportunity for Improvement)
- Writing audit findings using objective, evidence-based language
- Reporting results to management and auditees
- Managing corrective action requests and audit follow-up
- Conducting closing meetings and ensuring closure of findings
- Final exam (written + scenario-based) and course review

Assessment Activities:

- Live role play: Internal audit scenario simulation
- Nonconformity drafting activity
- Final written test + verbal evaluation with feedback

What You'll Receive

- Certificate of Completion issued by QLSS
- Training Manual / Handout (PDF)
- Final Assessment with Evaluation Report

Who Should Attend

- Internal Auditors (new or experienced)
- Quality Engineers and Quality Assurance personnel
- Supplier Quality and Manufacturing Engineers
- QMS Core Team Members
- First-time auditors preparing for internal or external audits
- Anyone responsible for QMS compliance and effectiveness

Trainer Profile

Our trainers are certified Lead Auditors and experienced automotive quality professionals with:

- 10–20 years of experience in IATF 16949 implementation and internal audits
- Practical exposure to audits in Tier 1, Tier 2, and component manufacturing environments
- Deep understanding of CSR integration, core tools (FMEA, SPC, MSA, APQP), and risk-based thinking
- Experience conducting and guiding internal audit teams across multi-site operations

Each session is enriched with real-world audit challenges, sample findings, and industry best practices — without naming specific OEMs to maintain neutrality and broad applicability.

Instructional Methodology

- Instructor-led presentations with clause walkthroughs
- Case study discussions with real-world scenarios
- Group exercises and simulations
- Role plays and audit interviews
- Final audit checklist and finding writing workshop
- Final evaluation and individual feedback

What Makes QLSS Training Unique

- Delivered by certified Lead Auditors with 10–20 years of hands-on auditing experience
- Highly practical and activity-based, not just theoretical
- Customer-Specific Requirements (CSR) are covered in audit context
- Designed to align with ISO 19011:2018 auditing practices
- Customizable for organizational needs including in-plant delivery
- Post-training Q&A support for implementation clarity
- QLSS is a recognized training partner across QMS, IATF, and Lean Six Sigma domains
