

Packaging and Handling Training

Duration: 1 Day

Mode: Online / Classroom / On-Site

Certification: QLSS Certificate of Completion

Course Introduction

This 1-day training program is designed to provide participants with essential knowledge and practical guidance on industrial packaging, material protection, safe handling, and labeling procedures. Packaging plays a critical role in ensuring product quality, customer satisfaction, and regulatory compliance during storage and transit.

The training is focused on manufacturing, automotive, engineering, and supplier operations where proper packaging standards and material handling reduce damages, rejections, and logistic issues.

Pre-requisites

- Basic knowledge of production, logistics, or dispatch functions
- No prior packaging training required

Learning Objectives

- Understand the importance of packaging in product protection and supply chain
- Identify types of packaging materials and applications
- Implement correct handling procedures to prevent damage and nonconformities
- Learn customer-specific labeling and traceability requirements
- Understand packaging standards related to automotive and export
- Identify packaging inspection and compliance checkpoints

Course Agenda

1. Introduction to Packaging Principles
 - Functions of packaging (protection, identification, convenience)
 - Packaging lifecycle and cost considerations

2. Packaging Materials and Types

- Corrugated, wooden, ESD, vacuum-sealed, returnable packaging
- Primary, secondary, tertiary packaging examples

3. Handling and Stacking Guidelines

- Do's and Don'ts in manual and mechanical handling
- Palletization, shrink wrapping, weight distribution
- Safety and ergonomics in handling

4. Labeling and Traceability

- Supplier/customer labeling formats
- Barcode, QR, part number, batch details
- Visual inspection of labeling compliance

5. Customer-Specific and Export Requirements

- Automotive packaging compliance expectations
- Export packaging, IPPC marking, moisture protection

6. Packaging Damage, Nonconformity, and Control

- Causes of damage during storage and transit
- Corrective and preventive actions
- Inspection checkpoints and documentation

Practical Activity:

- Group review of packaging samples and inspection report
- Labeling accuracy exercise and stacking simulation

What You'll Receive

- QLSS Certificate of Completion
- Packaging Guidelines Handout (PDF)

Who Should Attend

- Stores and Dispatch Staff
- Production and Logistics Teams
- Supplier Quality and Packaging Engineers

- Material Handling, Warehouse Operators
- Supervisors overseeing outbound shipments

Trainer Profile

Training is delivered by logistics, quality, and supply chain experts with practical experience in packaging design, export packaging compliance, and customer-specific requirements in automotive and engineering sectors. Trainers provide visual walkthroughs, inspection samples, and share best practices for cost-effective and compliant packaging systems.

Instructional Methodology

- Real packaging sample demonstrations and defect analysis
- Process walkthroughs using photos and video aids
- Group activity: Packaging inspection checklist
- Interactive labeling practice using real formats
- Trainer-led discussion on packaging controls and escalations

What Makes QLSS Packaging Training Unique

- Industry-specific focus for automotive and industrial goods
- Practical packaging review activity and compliance check
- Trainer experience across dispatch audits and export inspection
- Templates and formats customizable for your operations
- Promotes safe, efficient, and damage-free packaging culture
