

Advanced Product Quality Planning (APQP)

Mode: Online / Classroom / On-Site

Certification: QLSS Certificate of Completion

Course Introduction

Advanced Product Quality Planning (APQP) is a structured framework designed to ensure that a product satisfies customer requirements from concept to production. Mandated by IATF 16949 and widely used across OEMs and Tier 1 suppliers, APQP drives cross-functional collaboration in planning, development, validation, and launch phases.

This training provides a comprehensive understanding of APQP phases, expected deliverables, and its integration with other Core Tools such as FMEA, Control Plan, and PPAP. The focus is on how to implement APQP effectively in new product development (NPD) and engineering change management.

Pre-requisites

- Basic understanding of product design, manufacturing, or quality processes
- Exposure to NPD, process design, or IATF 16949 is helpful
- No prior APQP or Core Tools training required

Learning Objectives

- Understand the structure and five phases of APQP
- Identify inputs, outputs, and control points at each phase
- Prepare APQP project plans and manage milestones
- Integrate FMEA, Control Plan, and PPAP deliverables into the APQP process
- Evaluate APQP status using checklists and progress reports
- Apply APQP to actual projects, engineering changes, and launch readiness

Course Agenda

1. Introduction to APQP

- Purpose and evolution in the automotive industry
- APQP and IATF 16949 linkage
- Understanding customer requirements and VOC

2. The Five Phases of APQP

Phase 1: Planning and Definition

- Customer requirements and expectations
- Feasibility and risk analysis
- Project planning and team formation

Phase 2: Product Design and Development

- Design FMEA and special characteristics
- Verification and validation activities
- Design reviews and changes

Phase 3: Process Design and Development

- Process flow diagram and PFMEA
- Preliminary Control Plan
- Equipment, tooling, gages planning

Phase 4: Product and Process Validation

- Trial production and capability studies
- Pre-launch control plan and Run at Rate
- PPAP preparation

Phase 5: Feedback, Assessment, and Corrective Action

- Lessons learned and quality records
- Process audits and improvement activities

What You'll Receive

- QLSS Certificate of Completion

- Training Material / Handout (PDF Format)
- Final Assessment with Individual Evaluation Report

Who Should Attend

- New Product Development Engineers
- Project Managers and Team Leaders
- Quality Engineers and SQA Professionals
- Production Planners and Process Owners
- Anyone responsible for customer programs or engineering changes

Trainer Profile

Delivered by experienced professionals who have led multiple APQP implementations across automotive programs. Trainers bring deep insight into project gate reviews, launch planning, supplier development, and integration with IATF 16949 Core Tools.

Instructional Methodology

- Clause-wise explanation aligned with IATF 16949
- Templates and visual walkthroughs of deliverables
- Team exercises and sample formats
- Assessment-based evaluation
- Real project scenarios and best practices

What Makes QLSS APQP Training Unique

Based on practical implementation across supplier environments

- Includes activity-based APQP planning exercises
- Sample templates for real-time application
- Trainer expertise in audit support and customer validation
- Customizable to different industry segments (manufacturing, auto parts, engineering)
